

ABSTRACT**METHOD MAKING IT POSSIBLE TO RENDER USER-SYSTEM
INTERACTION INDEPENDENT OF THE APPLICATION AND OF THE
INTERACTION MEDIA**

The method of the invention consists, in a system of the type with three "*tiers*" (client 3, application server 2 and database 1), in inserting a fourth "*tier*" which is the business interaction (4) and which makes it possible to obtain a user-system interaction component that is independent of the services of the application and of the media.
